

Mobile Stairs

Need safe and corrosion-resistant access systems for your company? Want these stairs to be mobile as well? Then get in touch with us.

We can design and manufacture special solutions for you as one-off items or small batches or equally we can manufacture a standard solution in larger quantities.

Our mobile stairs of glass-fibre-reinforced plastic profiles are as suitable for use in corrosive environments as in areas where stairs should have an electrically insulating effect.

Mobile GRP stairs as movable access to a plant section.

GRP in the chemical industry

- Resistance in corrosive environments
- Machining and installation without flying sparks
- Resistance to weathering
- Low thermal conductivity
- Electrical insulation
- High strength with low weight
- Cost-effective in transport and handling
- Easy adjustment on site

Mobile yet stable at the same time.

The roller set of these GRP stairs only makes contact with the floor when the stairs are raised and moved. This ensures excellent stability with mobility at the same time.

Work platform

These mobile stairs are equipped with a work platform so that it's also easy to carry out installation work at height.

Sturdy construction

The sturdy construction of our GRP stairs and platforms ensures a long service life and therefore a high level of economic efficiency.

Surface

This GRP grating with micromesh ensures that any leaking liquids can drain away but at the same time means that nuts and bolts, for example, cannot fall through the grating.

Work platform

Whether mobile stairs with a small or large work platform – after consulting with you, we develop the appropriate solution for your production environment.

Rollable platforms

For different uses and specifically tailored to the customer's wishes.
